

Nipple prosthesis

Breast Care Service Patient Information Leaflet

Introduction

This leaflet has information on what a nipple prosthesis is and how to look after it.

What is a nipple prosthesis?

During a mastectomy and breast reconstruction, the natural nipple and areola is lost. Our maxillofacial laboratory can make a nipple prosthesis for you from a soft medical grade silicone, to attach to your reconstructed breast. It is soft, lightweight and custom made to match your existing nipple areola in size, shape, colour and projection.

What are the benefits?

It is a good option if you decide you do not want to have another operation to make nipples. The custom made nipple prosthesis can be made to look like your existing nipple and areola.

What does a nipple prosthesis look like?

Picture one shows an example of a ready-made nipple areola prosthesis of an average shade. Picture two shows examples of our custom made nipple areola prostheses, fabricated and colour matched to the patient.

Picture 1 – a ready-made nipple prosthesis

Picture 2 – custom made nipple prostheses

How does it stay on?

The back of the prosthesis is naturally tacky and will stay on your skin with a thin layer of Vaseline. The edges of the prosthesis are very thin and 'feathered' to blend into the skin. If you want, you can also use a water-soluble medical adhesive (like glue) that we can provide for you.

When and how often can I wear it?

You can wear your nipple areola prosthesis as often as you like. If you apply adhesive, it should stay on the skin whilst showering, swimming and sleeping. However, if it is exposed to hot water for a long period of time, for example soaking in a hot bath, it may loosen.

We recommend that you remove your prosthesis for a few hours a day, to keep your skin healthy and allow it to breathe.

How do I look after it?

You can clean your prosthesis in warm water with a mild soap, to remove any adhesive residue. Soaking the prosthesis in warm water helps to loosen the adhesive. You can remove the adhesive by gently rolling it off the prosthesis, using your fingertips.

What happens if I lose it?

If you lose your prosthesis, contact the Maxillofacial Laboratory. We keep a record of the impression, mould and shade match of your prosthesis, so we can make another one for you.
